Computer Science III **Lab I – CIRCULAR Doubly LINKED LIST**

Lab Goal :

This lab was designed to teach you more about linked lists. Copy your `DoublyLinkedList` class into this folder. Rewrite the program as a **circular doubly linked list**. *You may choose to use generics or not.*

Lab Description :

In this implementation you will store a reference to both the head and tail of the list in instance variables.

Sample Data :

See the main of lab15d.

Sample Output :

```
                         Original list values:  go on at 34 2.1 -a-2-1 up over
                                                num nodes = 8
        List values after calling nodeCount:  go on at 34 2.1 -a-2-1 up over
      List values after calling doubleFirst:  go go on at 34 2.1 -a-2-1 up over
       List values after calling doubleLast:  go go on at 34 2.1 -a-2-1 up over over
   List values after calling skipEveryOther:  go on 34 -a-2-1 over
 List values after calling removeXthNode(2):  go 34 over
List values after calling setXthNode(2,one):  go one over
 List values after calling removeXthNode(1):
```
